Project Anti-Trachoma 1944-1951
Lanchow Rotary Club & Shanghai Rotary Club
By Herbert K. Lau (劉敬恒) (Rotary China Historian)

1 December 2021

Since the inception of the 7 Areas of Focus by Rotary International in recent years, December every year is designated as “Disease Prevention and Treatment Month”, commencing from this Rotary Year 2015-2016.

The concern on disease prevention and treatment is not a new idea of service to address the community need in China. In the 1940s of the last century, Shanghai Rotary Club (上海扶輪社), as well as Lanchow Rotary Club (蘭州扶輪社) which was even several months old, had paid attention to the public health of the local people. There were projects in “Anti-Trachoma”.

What is Trachoma

Trachoma is an infectious disease caused by bacterium *Chlamydia trachomatis*. The infection causes a roughening of the inner surface of the eyelids. This roughening can lead to pain in the eyes, breakdown of the outer surface or cornea of the eyes, and eventual blindness. Untreated, repeated trachoma infections can result in a form of permanent blindness when the eyelids turn inward.

The bacteria that cause the disease can be spread by both direct and indirect contact with an affected person's eyes or nose. Indirect contact includes through clothing or flies that have come into contact with an affected person's eyes or nose. Children spread the disease more often than adults. Poor sanitation, crowded living conditions, and not enough clean water and toilets also increase spread.

Efforts to prevent the disease include improving access to clean water and treatment with antibiotics to decrease the number of people infected with the bacterium. This may include treating, all at once, whole groups of people in whom the disease is known to be common. Washing, by itself, is not enough to prevent disease but may be useful with other measures. Treatment options include oral azithromycin and topical tetracycline. Azithromycin is preferred because it can be used as a single oral dose. After scarring of the eyelid has occurred, surgery may be required to correct the position of the eyelashes and prevent blindness.

The disease is one of the earliest known eye afflictions, having been identified in Egypt as early as 15 B.C. Its presence was also recorded in ancient China and Mesopotamia. Trachoma became a problem as people moved into crowded settlements or towns where hygiene was poor. It became a particular problem in Europe in the 19th century. Stringent control measures were introduced and by the early 20th century, trachoma was essentially controlled in Europe, although cases were reported up until the 1950s.

Lanchow Rotary Club

Lanchow Rotary Club was organized and admitted to Rotary International on 11 November 1943 with 22 members. Nine of them were former Rotarians from Sian, Tsinan, Nanking, Foochow, respectively. The charter president was Fei Wen-Yao (費文堯), a government official of Salt Administration, and a former member of Sian Rotary Club (西安扶輪社).

When the Rotary Club of Lanchow was still few months old, it had already established a station to treat sufferers of trachoma – an eye ailment which affects a large percentage of local people, especially school children. The Club did not do the job alone. It won the generous financial support of the local public, obtained the full co-operation of a local hospital which furnished staff and supplies, and provided the necessary premises and equipment itself. Writing to Charles L. Wheeler, during whose term as President of Rotary International the Club was born, President Fei said, “We shall constantly endeavor to do our utmost to justify the confidence shown us.” After what the little Club had already done, Charlie Wheeler felt that goes without saying -- Modern weapons of science were battling an ancient disease in Lanchow (*Lanzhou*), China.

Dr. Wang Po-Hua examines a patient at the anti-trachoma clinic sponsored by the Rotary Club of Lanchow, China.

Shanghai Rotary Club

Another Chinese Rotary Club – Shanghai – had taken up the matter of improving the eye health of the nation. In 1947, the Club earmarked 12 million Chinese National Dollars (中華民國法幣 1,200 萬元) to start and support an anti-trachoma clinic.

Anti-trachoma work had had a top priority among Rotarians of Shanghai, China, for some time, during a ten-month period the Club's clinic on the grounds of a local factory treated 2,000 to 3,000 persons a month, or a total of 30,000 treatments. Another clinic saw 1,312 cases examined; and a third clinic – a mobile unit – was operated on a regular schedule (*see photo*).

Supplementary to the 2 Rotary Anti-Trachoma clinics in fixed premises, the 3rd clinic is mobile to provide such treatment to 2,100 youngsters living in Boys' Town, a settlement of former street urchins in an old jail. Shanghai Rotary Club President 1947-1948, George J. McCarthy (right 1), and his fellow Rotarians pose beside the Club's Mobile Anti-Trachoma Clinic (上海扶輪社主辦防治沙眼診療車)

(Note) The Rotary Anti-trachoma Clinic (上海扶輪社砂眼防治所) located at No.442, An Yuan Road, Putuo District (普陀區安遠路 442 號) carried on functioning (with 1 doctor, 2 nurses and 1 assistant) until 12 September 1951 when it was handed over by the Club to the Shanghai Municipal People's Government, and became a clinic of the Shanghai Municipal No.1 Workers Hospital (上海市市立第一勞工醫院).

***** ***** ***** ***** *****

During the 4th Plenary Session convened at the 39th Annual Convention of Rotary International on 19 May 1948, in Rio de Janeiro, Brazil, “Charlie” Wei Tsen-Fu (韋增復) (*Shanghai Rotary Club President 1946-1947; incoming Governor of 97th District 1948-1949; Classification - Coal Distribution*) told the congregation:

In the Shanghai Club during the past years, we have tackled many short projects for one year, a maternity hospital, tuberculosis, Salvation Army, orphanages, and things like that. But at the beginning of last year, we thought we would tackle something on the longer term.

You know, China has two deadly enemies: one is tuberculosis and the other is trachoma, which you people from America are not familiar with because you do not have that disease. But in China we have over 30 percent of the population afflicted with trachoma.

So, the Board of Directors and the Community Service Committee got together, and formed an Anti-Trachoma Committee. I was made Chairman of that Committee this year.

I want to tell the Rotarians here what we are doing. We started to ask for voluntary contributions from members, and we got the equivalent of about \$2,000. So, we started a clinic in a congested section. After that clinic got going, we sold the idea to the hospital agency, and we started clinics elsewhere. We also started a mobile unit so that the unit could visit the schools and factories. We plan to extend that project all over the country so that in a few years’ time we hope that Rotary will have made some contribution toward Community Service in China.

The Rotary Anti-trachoma Clinic (上海扶輪社砂眼防治所) located at No.442, An Yuan Road, Putuo District (普陀區安遠路 442 號) carried on functioning (with 1 doctor, 2 nurses and 1 assistant) until 12 September 1951 when it was handed over by the Club to the Shanghai Municipal People’s Government, and became a clinic of the Shanghai Municipal No.1 Workers’ Hospital (上海市市立第一勞工醫院).

Part of the handover documents of The Rotary Anti-Trachoma Clinic between Shanghai Rotary Club and Shanghai Municipal No.1 Workers Hospital.

The original papers are being kept by the Shanghai Municipal Archives at the Bund (上海市檔案館 -- 上海市黃浦區中山東二路 9 號).

Mayor Lauds Rotary Trachoma Clinic

The establishment of a public trachoma clinic by the Shanghai Rotary Club representing one of the most outstanding civic welfare projects undertaken by this international organization was lauded by Mayor K. C. Wu in an address at the opening ceremony of the clinic at 9 a.m. yesterday.

The ceremony, which was held at the newly decorated four-room premises at 563 Pennang Road, was attended by over 40 Rotarians, among whom were Messrs. George McCarthy, president; T. T. Zee, chairman; T. F. Wei, former president and now chairman of the Anti-Trachoma Committee. Mr. K. T. Lee of China Chemical Works, co-sponsor of the project, was also present.

Dr. Tsang Heads Clinic

Presiding at the function, Dr. F. S. Tsang, Superintendent and Chief Ophthalmologist, St. Luke's Hospital, briefly reviewed the preparations made during the past few months before the clinic could be opened to the public.

Dr. Chang, who is also a rotarian, is now director of the newly opened clinic, which is to take care of the squatters and factory workers in that slum area.

Mayor Wu, who expressed his gratification over the Rotarian project, spent more than half an hour inspecting the place, and thanked the Rotary Club for this civic welfare and humanitarian project which would do immense good to the city's destitute and would be of tremendous value to the local populace.

Following the Mayor's address, Dr. Tsang introduced the staff to the audience, including Dr. Wang Kwei-ching, doctor in charge of the clinic. Dr. Tsang said that the Rotary Club was grateful to the China Chemical Works in permitting them to use their premises for the medical project.

Dr. Tsang stated that several months' active preparations on the part of the Rotarians had made the project a success. More than \$100,000,000 had been contributed among the Rotarians for this humanitarian work.

Mobile Clinic Planned

A mobile trachoma clinic will also be organized soon to further the anti-trachoma drive launched by the Rotarians, according to the doctor. In this respect, he said that Mardens had agreed to supply a medical van to give medical aid as well as to help launch the publicity campaign with the aim of wiping out trachoma.

Dr. Tsang voiced the hope that the Rotary clubs at other localities in China would launch similar drives and have anti-trachoma clinics set up to make the Rotarian medical drive a "nation-wide affair."

Beginning yesterday, the Rotary Trachoma Clinic is open to the public, free of charge, from 9 to 12 a.m., and from 2 to 5 p.m., on all-week-days.
